Dreamline Plus

When Crystal Cable® introduced the Absolute Dream series in mid 2012, it set new standards for metallurgy and performance. The world's first entirely mono-crystal cable, its musical achievements are reflected in its fantastic reviews and multiple awards. But its performance left the Crystal Cable® team dreaming of more – more performance for more people.

What makes the Absolute Dream so special?

Its unique construction consists of a pure mono-crystal silver core, protected by Dupont Kapton and PEEK dielectrics and further safeguarded by two additional shielding layers, one of silver-plated mono-crystal copper and one of gold-plated mono-crystal silver, resulted in the ultimate goal – maximum signal transmission with minimum noise. As the flagship product, Absolute Dream uses four of these unique conductors, twisted into a single cable. But what would happen if we only used two conductors? That's the question we asked – and the answer is the Dreamline Plus. It made our dream a reality. With only two of our unique, precious metal conductors, the Dreamline Plus can cost half as much as the Absolute Dream, while still offering lots of its sonic and musical benefits. The result? Dreamline Plus makes it possible for more music lovers to listen to their recordings as they are meant to sound; live, in your own living room.

It's all about the mono-crystals

Their purity of sound and lack of sonic grain is what sets Crystal Cable® apart. In all previous models this was the result of a proprietary metallurgical process that injected pure gold molecules in between silver crystals, preventing oxidization of the conductors, reducing micro-distortion and ensuring consistent performance that remained stable over time. For years, this unique technology was the best available; until now! Breakthroughs in the understanding and treatment of the atomic structure of metals have led to a new era in cable technology. For the entire Crystal Cable® team, it was clear that mono-crystal metal conductors were the way to go; the off-the-chart technical measurements and staggering sound performance were undeniable. Each conductor is formed from a single large crystal, eliminating gaps or voids between atoms, meaning a significant further reduction in micro-distortion, rhythmic discontinuities and grain.

- Monocrystal silver core
- Kapton
- PEEK
- Silver plated monocrystal copper shield
- Gold plated monocrystal silver shield
- Transparent sleeve

Dreamline Plus

Combined with superior construction, dielectric materials and shielding, the results speak for themselves. Never has recorded music sounded so effortlessly natural and fluid, so expressive, delicate and dramatic. Mono-crystal technology makes this possible; Crystal Cable® makes it a reality.

The Crystal Cable® Dreamline Plus series includes RCA and XLR Interconnect cables, Loudspeaker cable, a full suite of Digital cables and Power cables.
