MOON Is Now More Connected Than Ever

MOON PRODUCTS NOW FEATURE APPLE AIRPLAY 2

MOON is delighted to announce that its performance audio streaming products* are even more connected as they now feature Apple AirPlay 2. The new integrated streaming module effortlessly allows Apple users to play music from any iOS device and change music with Siri voice control. AirPlay 2 also adds multi-room playback to MOON's premium selection of connectivity options.

The MiND2 streaming module and intuitive MiND app have ensured that MOON has long been the master of music control. The addition of AirPlay 2 further increases the range of connectivity options and will delight Apple lovers as the built-in controls on their device allow them to easily access their music. MOON owners can use Siri voice control to play their selected tracks.

AirPlay 2 offers complete control and lets the listener enjoy their favourite music or podcast throughout the home and in perfect sync. Different songs can be played in different rooms – music can be streamed in one room and a podcast can be played in another. With AirPlay 2 friends can add their own music to the mix. And all listeners can use Siri and say the song, say the room and then enjoy the performance.

Current MiND 2 owners who would like to add AirPlay 2 will need to contact their local MOON retailer. The upgrade can be ordered and installed through their local retailer.

Please note that 180 MiND and 380D cannot be upgraded. Also, freight charges are not included, and detailed information about the upgrade path will be communicated soon.

Etienne Gautier, MOON's export sales manager, said: 'We are pleased to partner with Apple and to have AirPlay 2 integrated in our streaming products. Our premium connectivity solutions have always been at the heart of what we do and now AirPlay 2 gives our customers a truly complete range of options.'

*MOON products featuring Apple AirPlay 2

- ACE – all-in-one music system

- MiND 2 network player

- 280D – streaming DAC

- 390 – network player/preamplifier

- 680D – streaming DAC
