New development: Silent Core One

Dear Sir or Madam,

We are delighted to present our latest development:
Silent Core One – our new generation of motors for the most demanding requirements.

The Silent Core One has been consistently designed for maximum smoothness and performance. Thanks to a completely new design, we have been able to reduce operating noise to an absolute minimum – for virtually silent operation combined with impressive power delivery.

In addition to its exceptional performance, the Silent Core One impresses above all with its extreme durability. The motor is designed for up to 50,000 record cleanings, setting new standards in terms of durability and reliability.

Your advantages at a glance:

- Extremely quiet operation
- Exceptionally powerful
- Minimized vibrations
- Very long service life
- Designed for approx. 50,000 cleaning cycles

With the Silent Core One, we offer you a forward-looking solution that meets the highest quality standards and significantly enhances your product range.

We would be happy to provide you with further technical details or marketing materials. We look forward to your feedback and to continuing our successful cooperation.

All devices from February onwards will feature this new development.
